Progeria Research Foundation

PRF By The Numbers: A Data Sharing Tool

- PRF By The Numbers is a **data sharing tool** originating from The Progeria Research Foundation's programs and services.

- We translate information collected within our programs and services, and develop charts and graphs which track our progress from year to year.

- This allows you to assess where we've been, and the improvements we've made for children with Progeria.

Progeria Research Foundation

Why Sharing Data Is Essential

- According to the National Institutes of Health:

  "data sharing is essential for expedited translation of research results into knowledge, products, and procedures to improve human health."

  http://grants.nih.gov/grants/guide/notice-files/NOT-OD-03-032.html

- In other words, everyone benefits by knowing and learning as much as possible about Progeria - the scientific and medical communities, the public, and the children.

NIH National Institutes of Health
Turning Discovery Into Health

Progeria Research Foundation

PRF By The Numbers…Here's How It Works

- We take raw data collected through our programs and services, remove any personal information to protect the participant, and present it to you in a format that is engaging and informative.

- PRF programs and services include:

  - The PRF International Registry
  - The PRF Diagnostics Program
  - The PRF Cell & Tissue Bank
  - The PRF Medical & Research Database
  - PRF Research Grants
  - Scientific Workshops
  - Clinical Trial Funding and Participation

Progeria Research Foundation

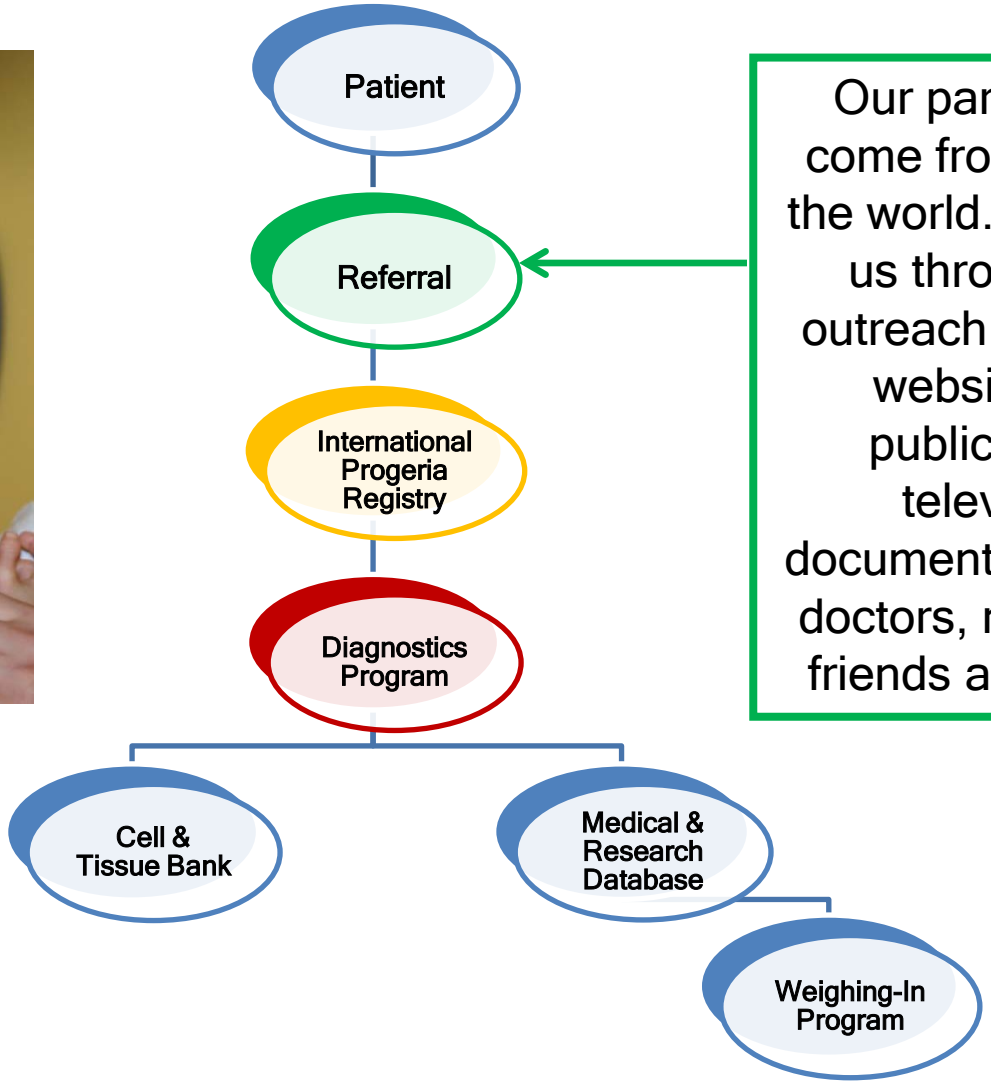
Our Target Audience

- PRF By The Numbers is intended for a broad array of users
  - Families and children with Progeria
  - The general public and nonscientists of all ages
  - Scientists
  - Physicians
  - The media
- This means that different types of slides will be of interest depending on who is looking at the information. We have designed this slide set so that you can pull out what is most important to you.
- We love suggestions - if you don't see some facts and figures here that you think would be informative, please let us know at

info@progeriaresearch.org

Progeria Research Foundation

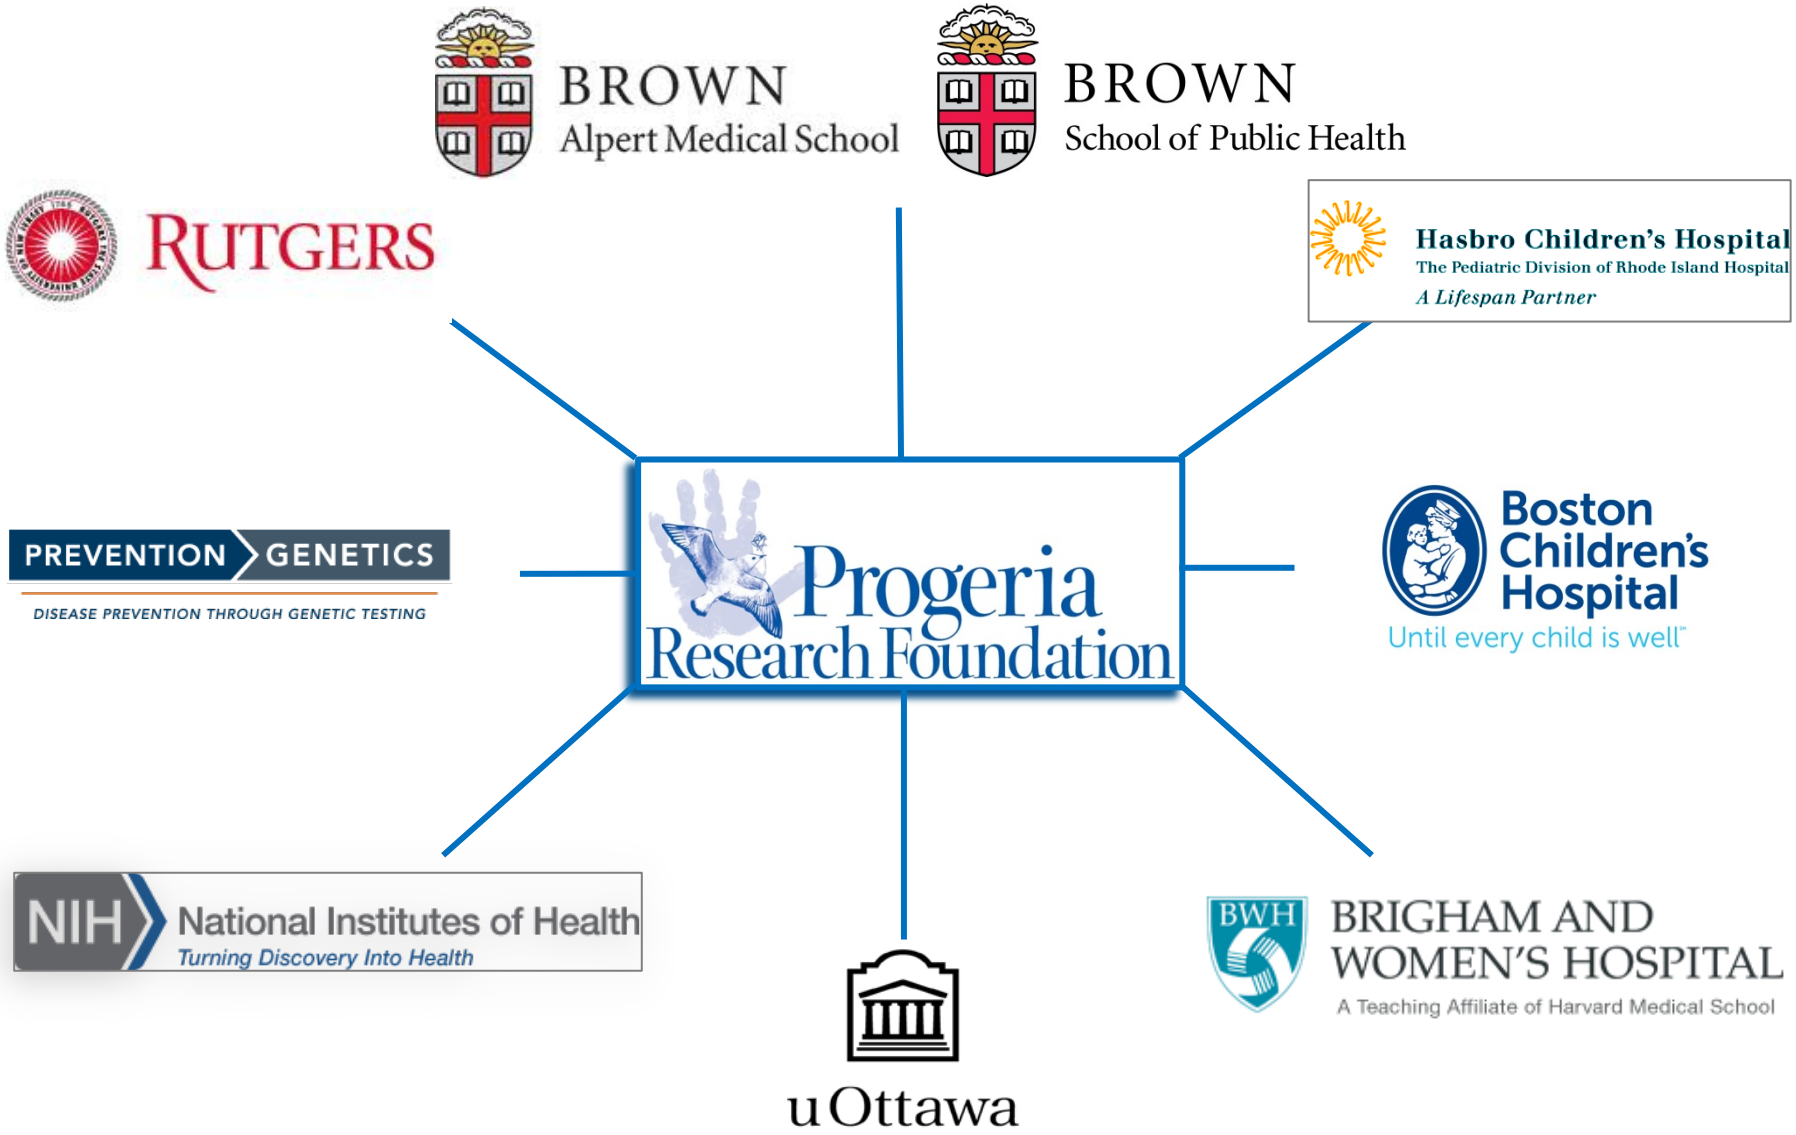
PRF Programs: It All Starts With The Children



Our participants come from all over the world. They find us through our outreach – the PRF website, our publications, television documentaries, their doctors, neighbors, friends and family.

Progeria Research Foundation

Collaborations For Success



Our Program Collaborators

Our collaborating institutions are crucial to our ability to help children with Progeria. We are extremely grateful for these ongoing partnerships:

- Brown University
  - Location of The PRF Medical & Research Database
  - Program IRB approval

BROWN
Alpert Medical School

BROWN
School of Public Health

- Hasbro Children's Hospital
  - Location of The PRF Cell & Tissue Bank
  - Program IRB approval

Hasbro Children's Hospital
The Pediatric Division of Rhode Island Hospital
A Lifespan Partner

- PreventionGenetics
  - CLIA*-approved genetic sequence testing

PREVENTION GENETICS
DISEASE PREVENTION THROUGH GENETIC TESTING

- Rutgers University Cell and DNA Repository
  - CLIA*-approved lymphoblast generation and distribution

RUTGERS

- University of Ottawa
  - Induced Pluripotent Stem Cell (iPSC)
  - CLIA*-approved generation and distribution

Progeria Research Foundation

Number of Living PRF-Identified Cases

As of October 1, 2014:

Total Number of Children with Progeria Worldwide: 123

HGPS* worldwide: 99

HGPS* in the United States: 15

Progeroid Laminopathies** worldwide: 24

Progeroid Laminopathies** in the United States: 6

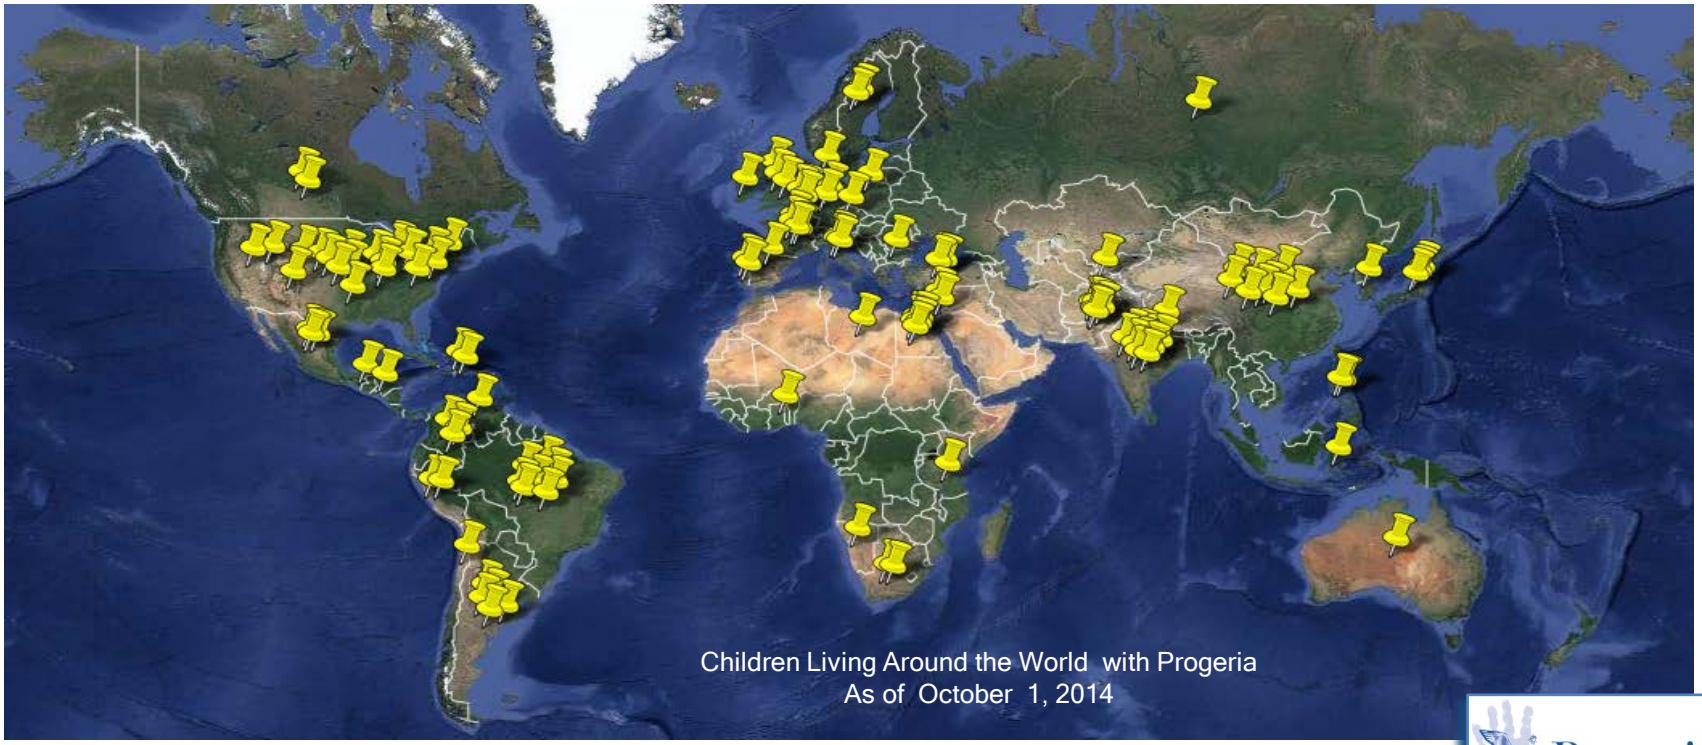
*Children in the HGPS category have a progerin-producing mutation in the LMNA gene

** Those in the Progeroid Laminopathy category have a mutation in the lamin pathway but don't produce progerin

Progeria Research Foundation

PRF-Identified Cases Reside In 43 Countries

Argentina	Chile	Dominican Republic	Guatemala	Israel	Namibia	Poland	Spain	Turkey
Australia	China	Egypt	Honduras	Italy	Nepal	Portugal	Sweden	USA
Belgium	Colombia	England	India	Japan	Pakistan	Russia	Tajikistan	Venezuela
Brazil	Czech Republic	France	Indonesia	Libya	Peru	South Africa	Tanzania	
Canada	Denmark	Germany	Ireland	Mexico	Philippines	South Korea	Togo



Progeria Research Foundation

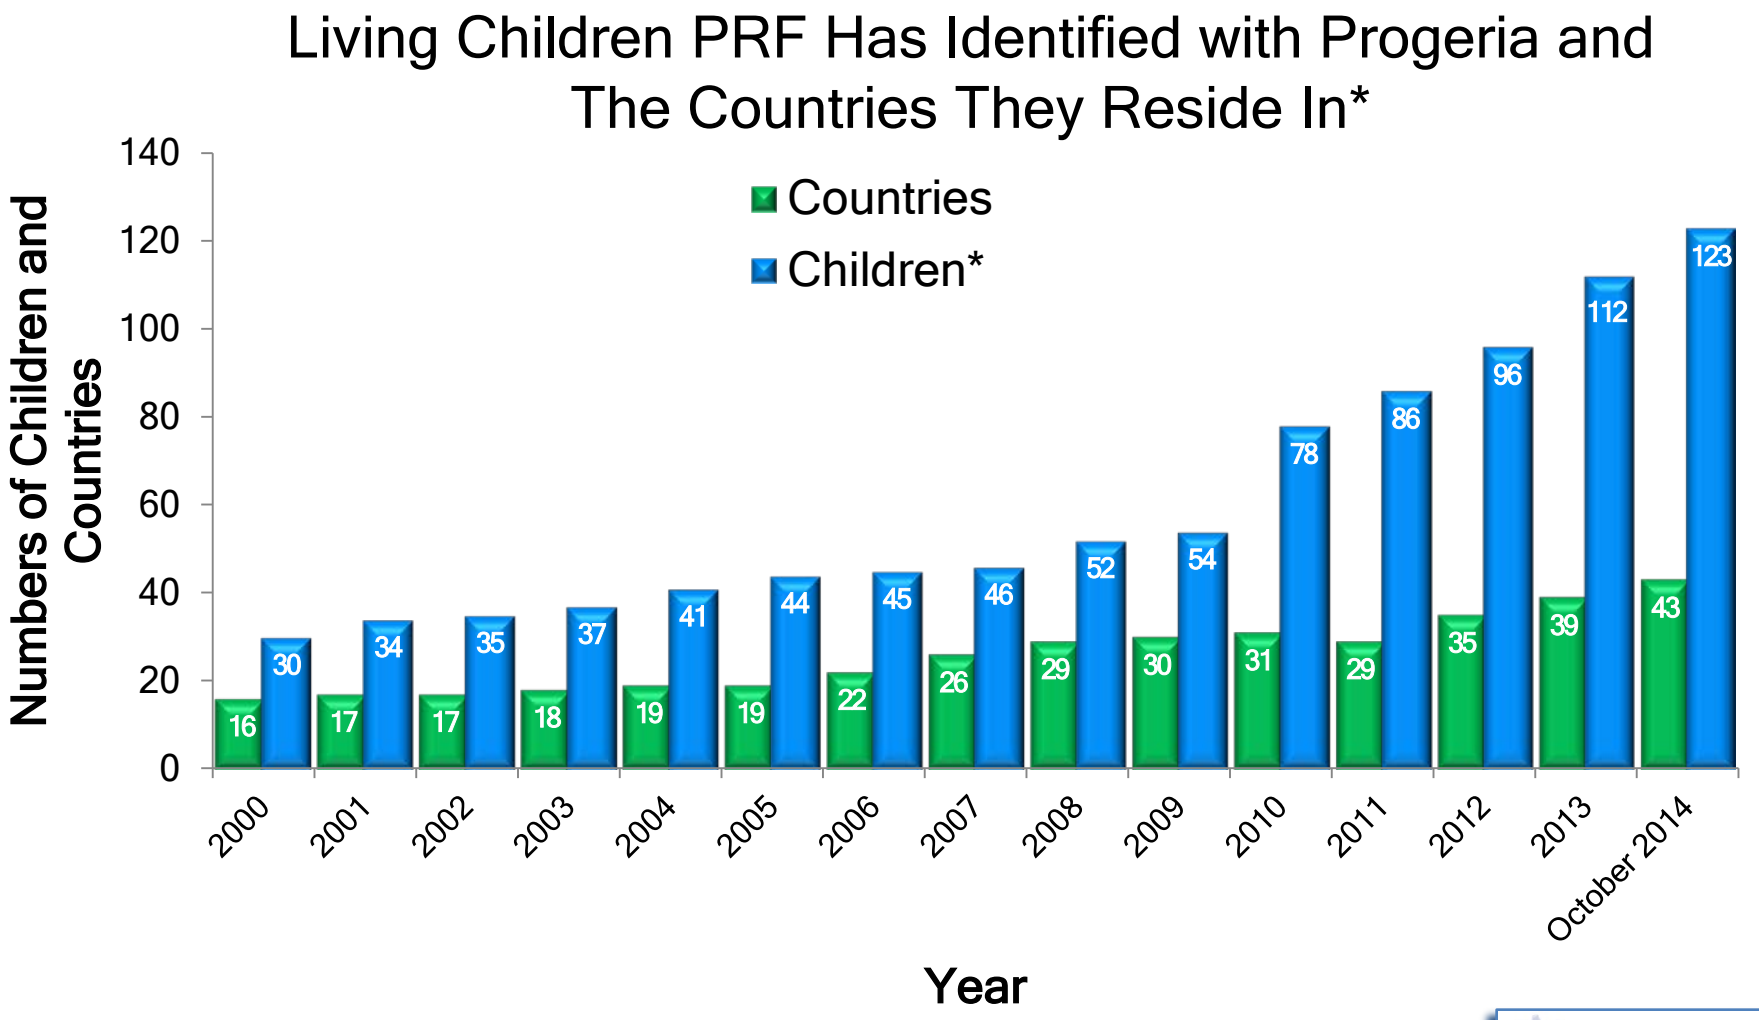
Every Year Our Numbers Grow



*When a child passes away, numbers are decreased.
Numbers include those with HGPS and genetically confirmed Progeroid Laminopathies

Progeria Research Foundation

Tracking Children with Progeria Through Prevalence

- How does PRF estimate how many children we are searching for, and in what countries? We use ***population prevalence***.

- Prevalence is the proportion of children with Progeria per total population.

Progeria Research Foundation

How Prevalence Is Estimated

- At PRF, we use a formula based on the number of children we've identified in the US. We then expand that out to the world population.
- We do this because we have the most complete reporting for the US and since Progeria has no gender, ethnic, or other biases, we assume that the prevalence in the US is the same prevalence in other countries.
- PRF estimates prevalence for years when the official US census provides a reliable population number.

USA Prevalence of Progeria

July 1, 2013 population statistics:

- The US population was:

  316,128,839 people

- Number of PRF-identified children with Progeria in the US:

  17

- Prevalence of HGPS in the US:
  17 in 316 million is about

  1 in 18 million people

Source: 2013 US population: http://www.census.gov/#

Progeria Research Foundation

Prevalence and World Population of Progeria

Given the current world population, as of July 2013

there are between **350** and **400** children living with Progeria worldwide.

PRF strives to find every child with Progeria because

in order to help every child, we must find every child

Progeria Research Foundation

Using Prevalence To Find Children In A Certain Country

We can now use the total population estimates for any given country, in order to understand whether we have found most or all children in a particular country.

- For example, as of July 1, 2013:

- Brazil's population was **201,032,714** people
- Number of children living with Progeria in Brazil is

201,032,714/18,000,000 = **11**

Source Brazil population: http://en.wikipedia.org/wiki/List_of_countries_by_population

Progeria Research Foundation

International Progeria Registry*

Program Goals:

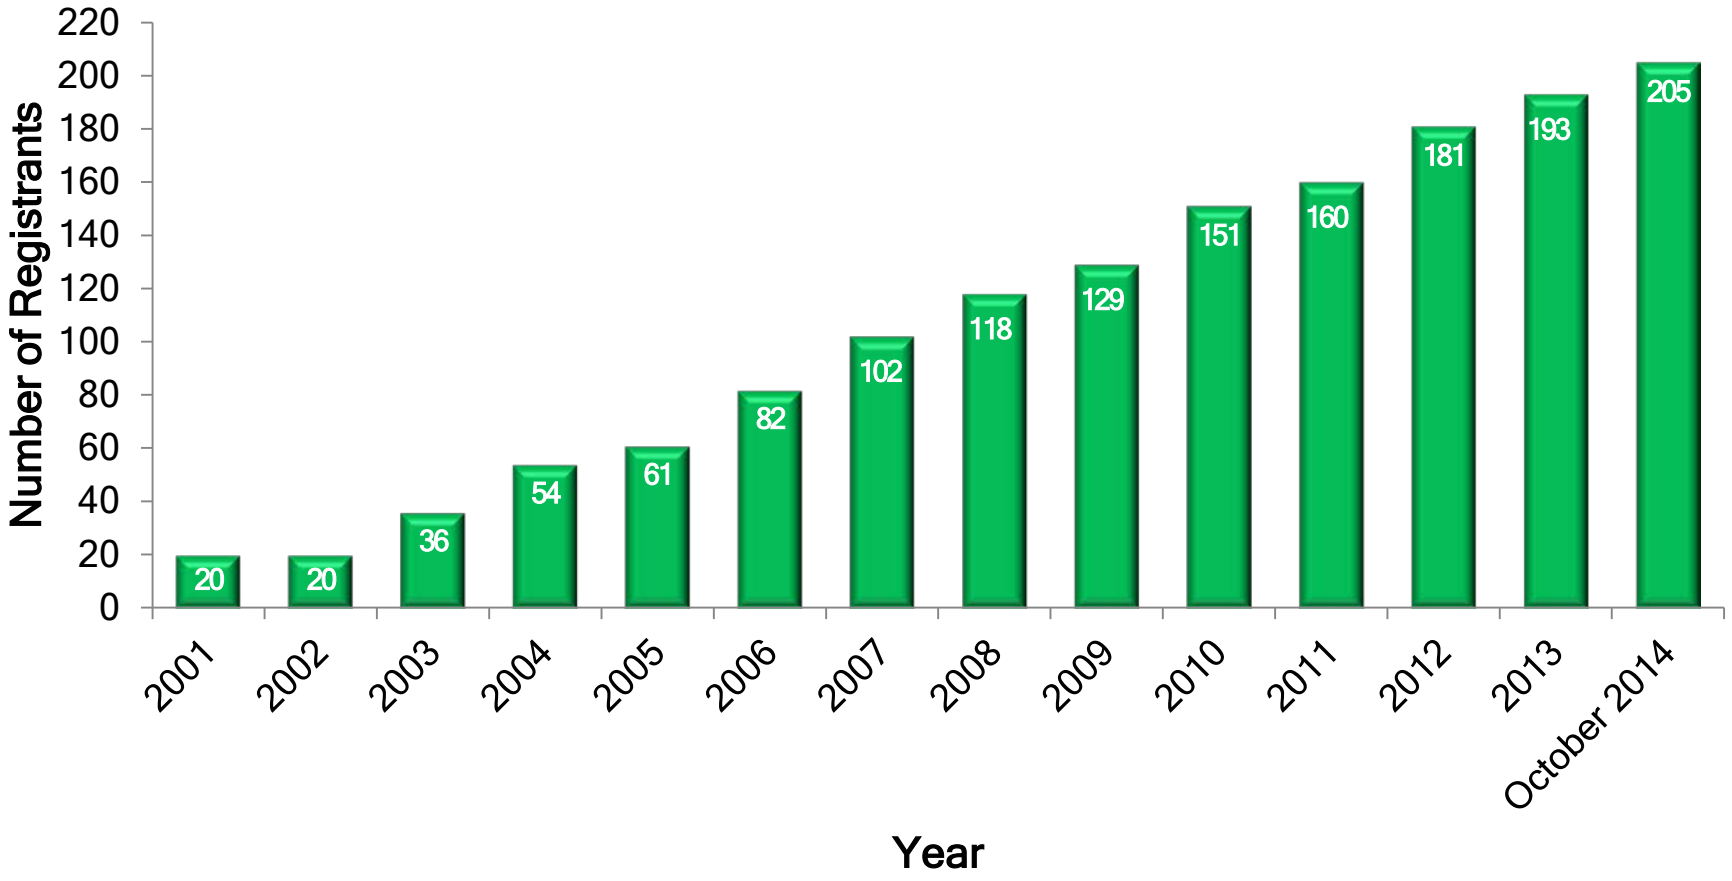
- Patient identification
- Outreach to patient families and their physicians
- A springboard for program enrollment

Registry forms available at www.progeriaresearch.org/patient_registry

*PRF International Registry includes those with genetically confirmed or clinically suspected Progeria, as well as those with other possible progeroid syndromes

Progeria Research Foundation

205 Children Have Registered With PRF



Progeria Research Foundation

…From 52 Countries

Algeria	Canada	Dominican Republic	Hong Kong	Israel	Netherlands	Portugal	South Korea	Turkey

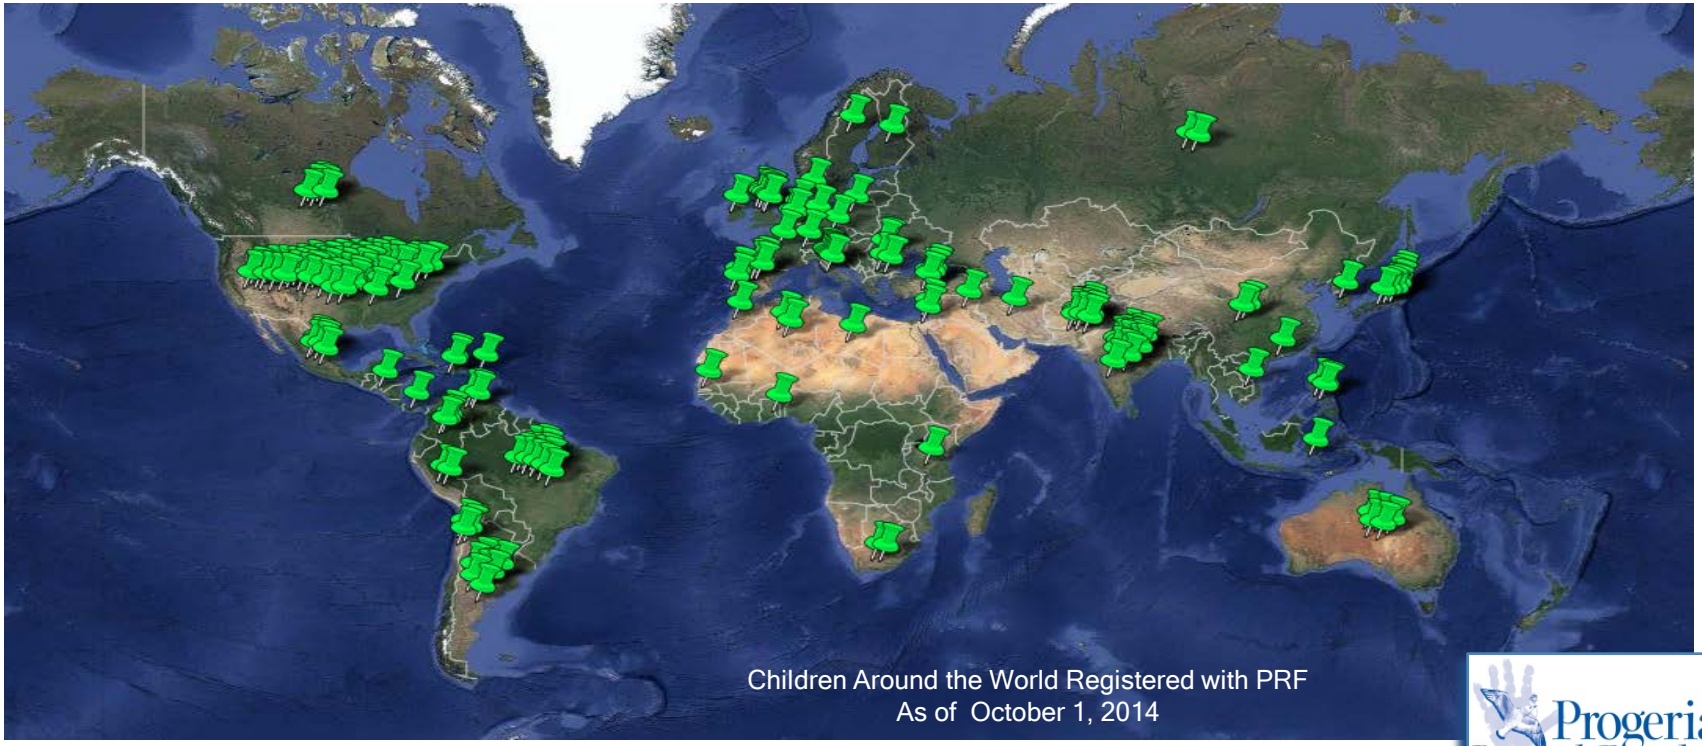
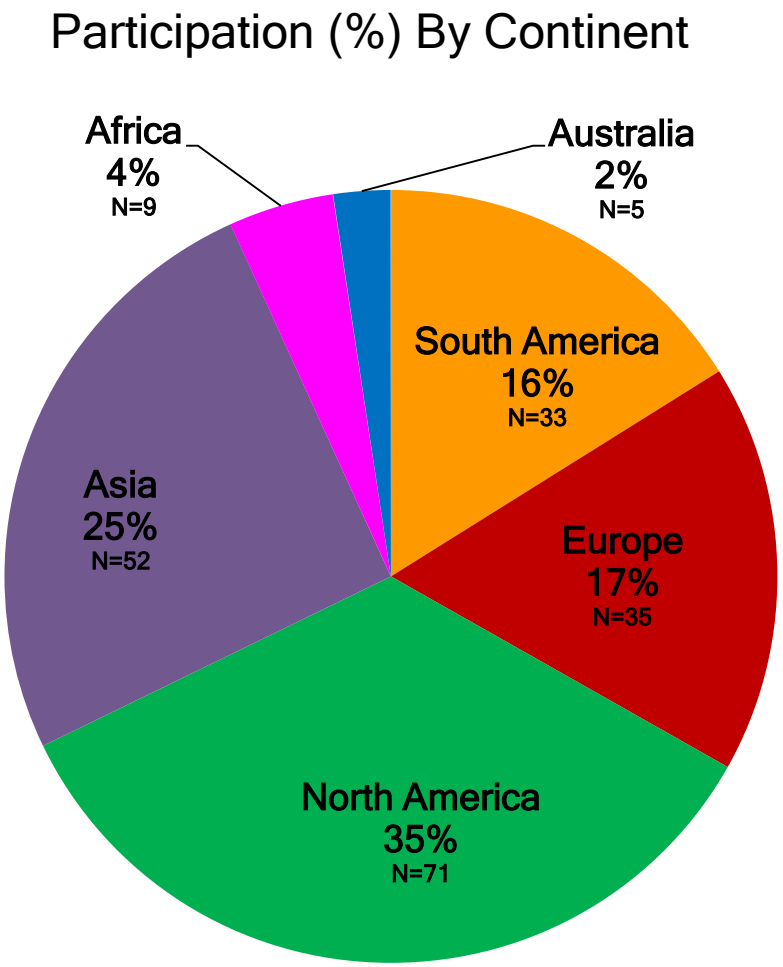
Bulgaria	Denmark	Honduras	Ireland	Morocco	Poland	South Africa	Togo	



...And All Continents



As of October 1, 2014

Progeria Research Foundation

PRF Diagnostics Program

Program Goal:

- Genetic Sequence Testing for Progeria-causing mutations

Pre-requisites for Testing:

- Registration with PRF International Registry
- Possible indications for genetic testing
  - Proband, prenatal – family history
  - Proband, postnatal - clinical presentation
  - Relative of positive proband

Testing information available at

www.progeriaresearch.org/diagnostic_testing

Progeria Research Foundation

Diagnostics Testing Summary

As of October 1, 2014:

Total Number of Proband Tests Performed* : 115

HGPS Mutations: 77

Zmpste24 Mutations: 2

Non-HGPS LMNA Mutations: 9

Average Number of Patients Tested Per Year : 10

All tests are performed in a Clinical Laboratory Improvement Amendments (CLIA) certified facility.
*An individual may have undergone multiple tests

Progeria Research Foundation

Mutations Identified Through PRF Diagnostics Program

DNA Mutation	Amino Acid Effect	Zygosity	Progerin Producing?	Number Diagnosed
Classic HGPS – LMNA Mutation				
1824 C>T, exon 11	G608G	heterozygous	Yes	65
Non Classic HGPS- LMNA Mutation				
1822 G>A, exon 11	G608S	heterozygous	Yes	4
1821 G>A, exon 11	V607V	heterozygous	Yes	2
1868 C>G, exon 11	T623S	heterozygous	Yes	1
1968+5 G>C, intron 11	---------	heterozygous	Yes	2
1968+1 G>C, intron 11	---------	heterozygous	Yes	2
1968+1 G>A		heterozygous	Yes	1
Progeroid Laminopathy- LMNA Mutation				
1579 C>T, exon 9	A527C	heterozygous	No	1
1579 C>T, exon 9	A527C	homozygous	No	5
1580G>T, exon9	A527L	Homozygous	No	1
1619 T>C, exon 10	M540T	homozygous	No	1
331 G>A, exon 1	G111L	heterozygous	No	1
Progeroid Laminopathy- Zmpste24 Mutation				
1274T>C, exon 10	L425P	homozygous	No	2

As of October 1, 2014

Progeria Research Foundation

PRF Medical & Research Database

Program Goals:

- Collect the patient health records for living and deceased children with Progeria
- Obtain long-term clinical data
- Abstract data for longitudinal and cross-sectional analyses
- Better understand the clinical disease process in Progeria and aging related diseases
- Develop treatment strategies and recommendations for health care professionals and families

Progeria Research Foundation

How The PRF Medical & Research Database Works

- Project staff obtain the patient's medical records and film studies from birth throughout the participant's lifespan.
- Medical records include visits to: primary care physicians, specialty physicians, hospital emergency rooms, hospital admissions, dentists, physical therapy, occupational therapy and school health records.
- Retrospective data abstraction protocol allows for specifically targeted or broad spectrum of data.

Enrollment information available at: www.progeriaresearch.org/medical_database

Progeria Research Foundation

Medical & Research Database Participation

129 Participants are enrolled from **39** countries and **1** US territory

Argentina	Chile	France	Ireland	Mexico	Philippines	Senegal	Tanzania
Australia	Colombia	Germany	Israel	Morocco	Poland	South Africa	Turkey
Belgium	Denmark	Honduras	Italy	Netherlands	Portugal	South Korea	USA

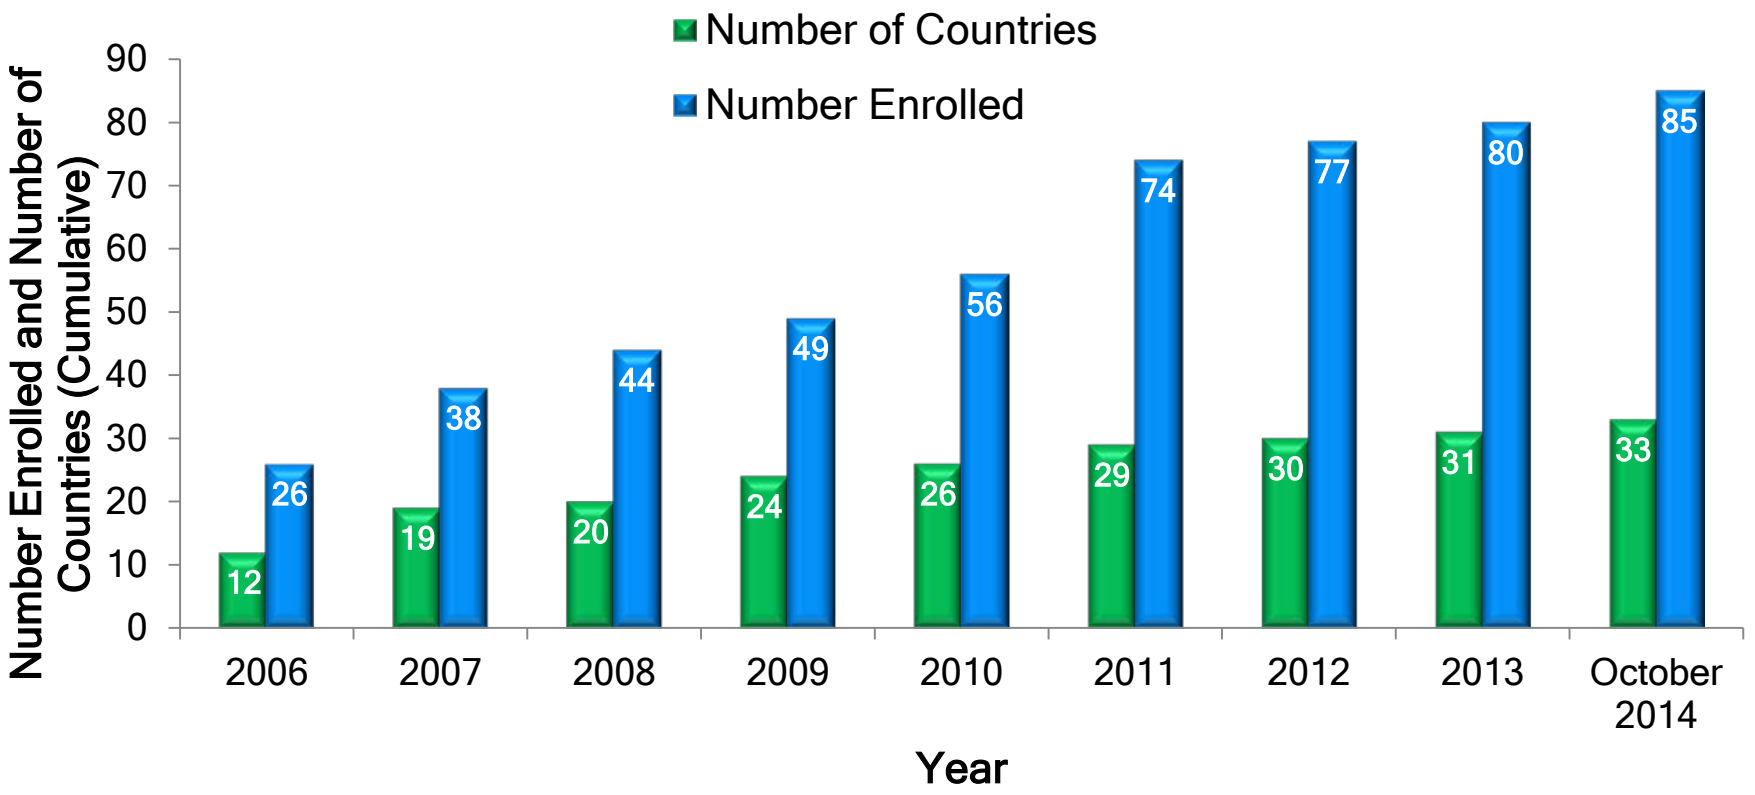
Participants Enrolled In The PRF Weighing-In Program and Countries of Residence

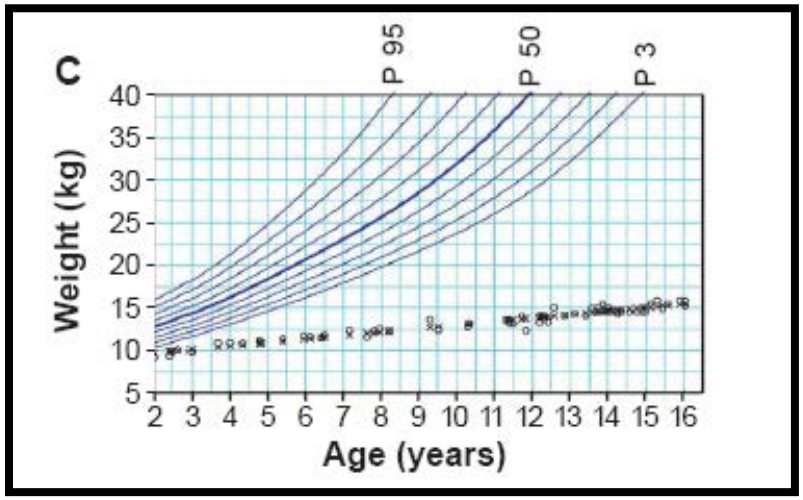


Progeria Research Foundation

Clinical Trials And The Weighing-In Program

- Data from this program were key in the development of primary outcome measure for the first drug treatment trial for Progeria.

- As of October 1, 2014, **53** children from The PRF Weighing-In Program have entered clinical treatment trials using this data.



Failure to Thrive Starts Towards End of Year One

Progeria Research Foundation

PRF Grants Program

Program Goals:

- Attract high level researchers to the field of Progeria
- Foster high quality publications
- Stimulate novel research that will lead to larger grants from other resources such as NIH, Ellison Foundation, and others
- Provide ability for researcher to thrive in the field
- Foster researchers of interest to PRF's mission

Grants program information available at

Progeria Research Foundation

PRF Granting Structure

- Innovator Awards:
  - 2 years, up to $75,000 per year
  - Allows an investigator to embark on new areas and produce enough preliminary data to compete for longer-term funding by NIH and/or other agencies.
- Established Investigator Awards:
  - Up to 3 years, up to $100,000 per year.
  - For senior investigators established either in the field of Progeria or a field that can be directly applied to Progeria
- Specialty Awards:
  - Funding amounts and lengths flexible
  - For smaller, technology-driven projects, e.g., sequencing, drug screening, obtaining cell lines, antibody preparation, animal models, other

Progeria Research Foundation

Grant Funding Rates And Topics

As of July 1, 2014, The PRF funding rate is **39.6%**

- Since inception, **139** grant applications received and **55** funded
- PRF has funded **51** researchers from **35** labs in **10** countries

  - Lamina A, progerin, Lamin B in HGPS and aging
  - Genetics and nuclear function
  - Preclinical Drug Therapy
  - Molecular Abnormalities and Therapies
  - Vascular Pathology
  - Mouse Models
  - Stem Cell Investigations and Therapy
  - Clinical Trials

Progeria Research Foundation

PRF-Funded Clinical Treatment Trials

Progeria Research Foundation

Clinical Drug Treatment Trials

Goals:

- To define the natural history of HGPS in quantifiable terms that will expand our ability to measure treatment outcome
- To assess the safety of new treatments for HGPS
- To measure effects of treatments for children with HGPS on disease status, changes in health, and survival

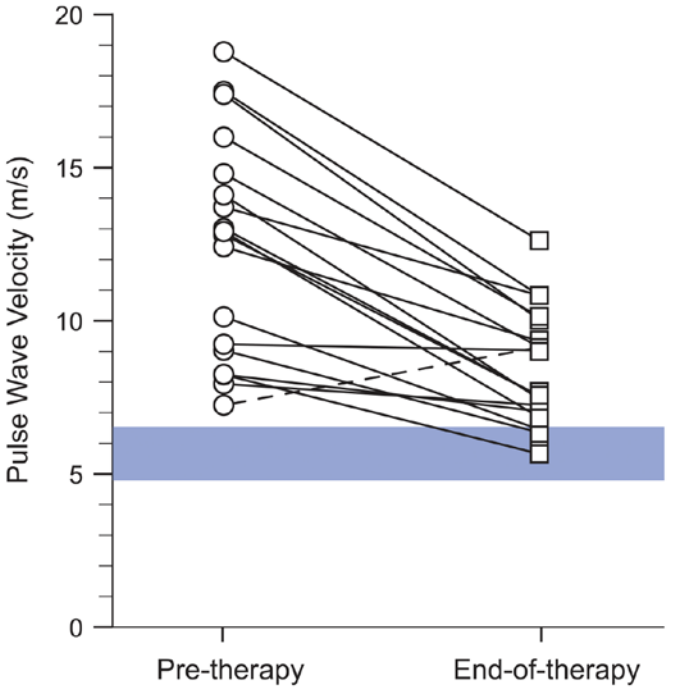
Treatment Trial Collaborations For Success

- **The children are seen by physicians from:**
  - Boston Children's Hospital
  - Dana-Farber Cancer Institute
  - Brigham and Women's Hospital
- **Data were also generated by scientists from:**
  - Alpert Medical School at Brown University
  - Brown University School of Public Health
  - University of California Los Angeles
  - National Human Genome Research Institute
  - Schering-Plough Research Institute
- **Lonafarnib generously provided by Merck**

Clinical Treatment Trial Efficacy Results

Lonafarnib, a type of farnesyltransferase inhibitor (FTI) is our first treatment for Progeria.

- Results showed improvement in:
  - Rate of weight gain
  - Increased vascular distensibility
  - Improved bone structure
  - Better neurosensory hearing



Gordon et al, PNAS, 2011
