PRF By The Numbers is a data sharing tool originating from The Progeria Research Foundation’s programs and services.

- We translate information collected within our programs and services, and develop charts and graphs which track our progress from year to year.

- This allows you to assess where we’ve been, and the improvements we’ve made for children with Progeria.
Why Sharing Data Is Essential

➢ According to the National Institutes of Health:
  “data sharing is essential for expedited translation of research results into knowledge, products, and procedures to improve human health.”
  

➢ In other words, everyone benefits by knowing and learning as much as possible about Progeria - the scientific and medical communities, the public, and the children.
We take raw data collected through our programs and services, remove any personal information to protect the participant, and present it to you in a format that is engaging and informative.

PRF programs and services include:

- The PRF International Registry
- The PRF Diagnostics Program
- The PRF Cell & Tissue Bank
- The PRF Medical & Research Database
- PRF Research Grants
- Scientific Workshops
- Clinical Trial Funding and Participation
Our Target Audience

- PRF By The Numbers is intended for a broad array of users
  - Families and children with Progeria
  - The general public and nonscientists of all ages
  - Scientists
  - Physicians
  - The media

- This means that different types of slides will be of interest depending on who is looking at the information. We have designed this slide set so that you can pull out what is most important to you.

- We love suggestions - if you don’t see some facts and figures here that you think would be informative, please let us know at info@progeriaresearch.org
Our participants come from all over the world. They find us through our outreach - the PRF website, our publications, television documentaries, their doctors, neighbors, friends and family.
Our collaborating institutions are crucial to our ability to help children with Progeria. We are extremely grateful for these ongoing partnerships:

Hasbro Children’s Hospital
Location of The PRF Cell & Tissue Bank
Program IRB approval

PreventionGenetics
CLIA*-approved genetic sequence testing

Ottawa Hospital Research Institute
Induced Pluripotent Stem Cell (iPSC)
CLIA*-approved generation and distribution
Our Clinical Trial Collaborators

Our collaborating institutions are crucial to our ability to help children with Progeria

Harvard University - Associated Hospitals:
Boston Children’s Hospital
Brigham and Women’s Hospital
Dana Farber Cancer Institute

NIH - funded Clinical and Translational Study Unit at Boston Children’s Hospital
Number of Living PRF-Identified Cases

December 31, 2023

Total Number of Children with HGPS* and PL** Worldwide: 196

HGPS* worldwide: 144
HGPS* in the United States: 16
Progeroid Laminopathies** worldwide: 52
Progeroid Laminopathies** in the United States: 12

*Children in the HGPS category have a progerin-producing mutation in the LMNA gene

**Those in the Progeroid Laminopathy category have a mutation in the lamin pathway but don’t produce progerin

**Cases of PL do not include those identified solely from published scientific journal articles

© 2023 The Progeria Research Foundation. All Rights Reserved.
PRF-Identified People Living with HGPS & PL Reside In 50 Countries

144 Known Children and Young Adults with HGPS and 52 Known People with PLs Living Around the World as of December 31, 2023

Note that previous versions of PRF By the Numbers have also reported on cases of PL solely from the literature. These cases are no longer included in this report.

Living Children and Adults PRF has identified with Progeria and the countries they reside in from 2000 - 2011

* Total number of known cases include both HGPS & PL
* When a child passes away, numbers are decreased
Living Children and Adults PRF has identified with Progeria and PLs and the countries they reside in from 2012 – 2023*

- Cases of PL do not include those identified solely from published scientific journal articles
- When a child passes away, numbers are decreased
How does PRF estimate how many children we are searching for, and in what countries? We use population prevalence.

Prevalence is the proportion of children with Progeria per total population.
How Prevalence Is Estimated

➢ At PRF, we use a formula based on the number of children we’ve identified in the US. We then expand that out to the world population.

➢ We do this because we have the most complete reporting for the US and since Progeria has no gender, ethnic, or other biases, we assume that the prevalence in the US is the same prevalence in other countries.

➢ PRF calculates prevalence for the US based on *Worldometer* population estimates.
USA Prevalence of Progeria

December 31, 2023 population statistics:

The US population is:

340,850,921 people

Number of PRF-identified children with HGPS in the US (3 year average):

18

Average prevalence of HGPS in the US: 18 in 341 million is about

1 in 19 million people

*estimates routinely fall between 1 in 18 - 1 in 20 million people.
Prevalence and World Population of Progeria

Given the world population on December 31, 2023

There are between 350 and 450 children living with Progeria worldwide

PRF strives to find every child with Progeria because in order to help every child, we must find every child.
Using Prevalence To Find Children In A Certain Country

We can now use the total population estimates for any given country, in order to understand whether we have found most or all children in a particular country.

- For example, as of December 2023:

  Brazil’s population was estimated as

  **216,993,327** people

  Using Prevalence, the number of children living with Progeria in Brazil is $216,993,327/19,000,000 = 11$

  PRF has identified 9 of these 11 children, and is searching for the 2 others

* Data based on the latest Worldometers estimates
International Progeria Registry*

Program Goals:

- Patient identification
- Outreach to patient families and their physicians
- A springboard for program enrollment

Registry forms available at
https://www.progeriaresearch.org/international-registry-2/

*PRF International Registry includes those with genetically confirmed or clinically suspected Progeria, as well as those with ZMPSTE24 and other possible progeroid syndromes
389 Children and Adults Have Been Registered With PRF

Participation (%) By Continent

- Africa: 7.7% (N=30)
- Australia: 1.6% (N=6)
- South America: 14.9% (N=58)
- Europe: 14.9% (N=58)
- Asia: 38.3% (N=149)
- North America: 22.6% (N=88)
Program Goal:

- Genetic Sequence Testing for Progeria-causing mutations

Pre-requisites for Testing:

- Registration with PRF International Registry
- One or more of the following
  - Family history - proband, prenatal
  - Phenotypic presentation - proband, postnatal
  - Relative of positive proband

Testing information available at:

https://www.progeriaresearch.org/the-prf-diagnostic-testing-program/
Diagnostics Testing Summary

December 31, 2023

Total Number of Proband Tests Performed: 167

Exon 11 (HGPS) Mutations: 117

Other Progeroid Laminopathies (Exons 1-12): 13

ZMPSTE24 Mutations: 2

Average Number of Patients Tested Per Year: 8

All tests are performed in a Clinical Laboratory Improvement Amendments (CLIA) certified facility.

PRF Cell & Tissue Bank

Program Goals:

- Provide a resource for researchers worldwide
- Ensure the sufficient availability of genetic and biological materials essential for research aimed at understanding the pathophysiology of disease and the links between Progeria, aging and heart disease
- Obtain long-term clinical data

Resource information available at: https://www.progeriaresearch.org/cell-and-tissue-bank/
As of December 31, 2023

Total Number of Participants: 361*

- **71** Dermal Fibroblast Lines from 47 affected and 24 parents
- **6** Immortalized Fibroblast Cell Lines from 1 affected and 5 parents
- **126** Lymphoblast Lines from 71 affected, 47 parents and 8 siblings
- **9** Induced Pluripotent Stem Cell Lines from 5 affected and 4 parents

* Participants may have donated multiple times
* Additional sample types are available for special projects upon request

PRF Cell & Tissue Bank Distribution

As of December 22, 2023:

237 Research Teams From 29 Countries Have Received

1534 Cell Lines
204 DNA Samples
455 Tissue, plasma, serum and other biological samples
32 Lonafarnib Samples

Senescent Progeria Fibroblasts in Culture

© 2020 The Progeria Research Foundation. All Rights Reserved.
Cells and biological material have been distributed to **237** laboratories in **29** countries

Complete list of researchers available at:

https://www.progeriaresearch.org/cell-and-tissue-bank-recipients
Program Goals:

- Collect the patient health records for living and deceased children with Progeria
- Obtain long-term clinical data
- Abstract data for longitudinal and cross-sectional analyses
- Better understand the clinical disease process in Progeria and aging related diseases
- Develop treatment strategies and recommendations for healthcare professionals and families
How The PRF Medical & Research Database Works

- Project staff obtain the patient’s medical records and film studies from birth throughout the participant’s lifespan.
- Medical records include visits to: primary care physicians, specialty physicians, hospital emergency rooms, hospital admissions, dentists, physical therapy, occupational therapy and school health records.
- Retrospective data abstraction protocol allows for specifically targeted or broad spectrum of data.

Enrollment information available at: https://www.progeriaresearch.org/medical-database/
221 Participants are enrolled from 55 countries and 1 US territory

Algeria, Argentina, Australia, Bangladesh, Belgium, Brazil, Canada, Chile, China, Columbia, Denmark, Dominica Republic, Egypt, England, France, Germany, Guatemala, Guyana, Honduras, India, Indonesia, Ireland, Israel, Italy, Japan, Kazakhstan, Libya, Mexico, Morocco, Nepal, Netherlands, Oman, Pakistan, Papua New Guinea, Peru, Philippines, Poland, Portugal, Puerto Rico, Romania, Russia, Senegal, Serbia, South Africa, South Korea, Spain, Sri Lanka, Suriname, Sweden, Tanzania, Togo, Turkey, Ukraine, USA, Venezuela, Vietnam
Types Of Data Collected

- Participants with Medical Records Reports: 166
- Participants with Radiology Studies: 65

Data from this program were key in the development of primary outcome measure for the first drug treatment trial for Progeria.

As of December 1, 2018, 90 children from The PRF Weighing-In Program have entered clinical treatment trials using this data.
PRF-Funded Clinical Treatment Trials
Clinical Drug Treatment Trials

Goals:

- To define the natural history of HGPS in quantifiable terms that will expand our ability to measure treatment outcome
- To assess the safety of new treatments for HGPS
- To measure effects of treatments for children with HGPS on disease status, changes in health, and survival
Post-translational processing and medications currently under investigation in clinical treatment trials for Progeria. Items in green = enzymes. Items in red = clinical trial medications that inhibit corresponding enzymes. Lonafarnib is a farnesyltransferase inhibitor. Everolimus is a rapamycin analogue that inhibits mTOR and promotes cellular autophagy. FT=farnesyltransferase.

Lonafarnib, a type of farnesyltransferase inhibitor (FTI) is our first treatment for Progeria.

- Results showed improvement in:
  - Rate of weight gain
  - Increased vascular distensibility
  - Improved bone structure
  - Better neurosensory hearing
  - Increased Lifespan

Gordon et al, PNAS, 2011
Positive Effects of Lonafarnib (Zokinvy) on Progeria: Results of PRF’s Clinical Treatment Trials

- Average increased lifespan of 4.3 years
- Increased vascular distensibility
- Improved bone structure
- Better neurosensory hearing
- Modest increase in rate of weight gain

Gordon et al., PNAS, 2011 and Gordon et al., JAMA, 2018
Gordon et al., Circulation 2023
3 Ways to Access Lonafarnib (Zokinvy)

Zokinvy (lonafarnib) is an FDA approved drug in the US. It is the current standard of care for those with Progeria. It is available through

1. Prescription in the US and in select non-US countries
2. PRF’s clinical treatment trials
3. The manufacturer’s (Eiger) Managed Access Program in select non-US countries

We are far from finished!
We must forge ahead with increased intensity and collaborative efforts to find additional treatments, and the cure!

Please contact PRF at info@progeriaresearch.org for more information on how to access Zokinvy (lonafarnib) for your child or patient with Progeria

PRF’s research focus is highly translational. Topics must fall within the following research priorities:

- Projects that are likely to lead to clinical treatment trials within 5 years. This includes the discovery and/or testing of candidate treatment compounds in cell-based or animal models of HGPS. Only proposals that test compounds in a progerin-producing animal or cell model will normally be considered. Analyses in non progerin-producing models are acceptable, but only as a comparison to progerin-producing models and with strong justification.

- Development of gene-and cell-based therapies to treat Progeria

- Assessment of natural history of disease that may be important to developing outcome measures in treatment trials (preclinical or clinical)

**Phase I Proposals:** Awards are typically for 1-2 years in the range of $75,000/year. PRF will conduct a thorough cost analysis for each project during evaluations of submissions.

**Required Qualifications.** Principal investigators must hold a faculty appointment or equivalent. Awards will be granted only to applicants affiliated with institutions with 501(c)3 tax-exempt status, or the equivalent for foreign institutions.

**Letter of Intent (LOI).** A letter of intent is required and must be approved before a full application will be considered. Instructions to submit a Letter of Intent and grant application information, can be found at [https://www.progeriaresearch.org/grant-application/](https://www.progeriaresearch.org/grant-application/).

Grant Funding Topics

As of December 31, 2023:

- Since inception 281 grant application received and 84 funded
- PRF has funded 69 principal investigators from 55 institutions in 14 countries

- Lamina A, progerin, Lamin B in HGPS and aging
- Genetics and nuclear function
- Preclinical Drug Therapy
- Molecular Abnormalities and Therapies
- Vascular Pathology
- Mouse Models
- Stem Cell Investigations and Therapy
- Clinical Trials

* Submissions include Letters of Intent and Full Grants
PRF has funded 69 principal investigators from 55 institutions in 14 countries

Meeting Goals:

➢ To promote collaboration between basic and clinical scientists toward progress in Progeria, cardiovascular, and aging research PRF has held international scientific meetings.
These are large multi-day workshops open to all scientists. Clinical and basic researchers spend intense days sharing data and planning new collaborations for progress towards treatments and cure.

Various NIH Institutes have funded all international workshops through R13 and other granting mechanisms.

Other organizations have also generously sponsored workshops.
Growth of Global Interest In PRF Workshops

- Number of Posters
- Registrant Countries
- Registrant Number

2001: 3 posters, 10 registrant countries, 10 registrant number
2003: 5 posters, 10 registrant countries, 10 registrant number
2005: 10 posters, 20 registrant countries, 10 registrant number
2007: 10 posters, 30 registrant countries, 10 registrant number
2010: 140 posters, 36 registrant countries, 14 registrant number
2013: 180 posters, 56 registrant countries, 18 registrant number
2016: 26 posters, 52 registrant countries, 14 registrant number
2018: 50 posters, 52 registrant countries, 14 registrant number
2020: 377 posters, 50 registrant countries, 26 registrant number
2022: 124 posters, 50 registrant countries, 26 registrant number

* 2020 was a webinar. Posters N/A

Scientific Publications

As of December 22, 2023:

185 Scientific articles have been published citing The Progeria Research Foundation Grants Funding Program

130 Scientific articles have been published citing PRF Cell & Tissue Bank resources:

   Publication list at www.progeriaresearch.org/prf-cell-and-tissue-bank-publications/

33 Scientific articles have been published citing The PRF Medical & Research Database:

   Publication list at www.progeriaresearch.org/medical-database/

28 Scientific articles have been published from clinical trial data

   See slide #54 and #55

4 Scientific articles have been published concerning PRF Scientific Workshops
